

Prokuro Subscription Pricing v1.1 — Revised Decision Brief

Date: 2026-08-15 · Status: **LOCKED (V1.1)** · Prices unchanged: Growth \$149 / Scale \$399.

1. What changed from v1

Prices and packaging stay locked. Founder corrections: Free may purchase under small caps; Digi-Key quota is 50,000/day and 480/min (not 1,000/120); BOM and MPN data is kept, not deleted; Bedrock is on for Growth and Scale; Free gets limited refresh so the upgrade is live monitoring, not an empty product; quotes are not a public SKU headline — use a single purchasing-actions cap. Code still enforces the old 1k/120 limiter and must be updated before these quotas mean anything.

TOPIC	V1 (SUPERSEDED)	V1.1 (LOCKED)
Free purchasing	can_purchase=false; quotes/orders 0	Allowed. 5 purchasing actions/mo, max 2 orders when enabled
Digi-Key quota	1,000/day · 120/min (wrong)	50,000/day · 480/min (billing@prokuro.ai). Code still 1k/120
Data / “retention”	Delete Free after 14 days	Keep forever. Gate refresh, not storage
Free sync	Excluded from daily sync	Weekly refresh of the 1 active BOM + stale banner
Paid sync	Daily if include_in_daily_sync	Daily refresh of MPNs on active monitored BOMs
Bedrock	Off until explicitly enabled	On for Growth and Scale. Free: Haiku, capped
Quotes on the grid	25 / 200 quotes as a SKU line	Not a headline. Internal purchasing-actions pool

2. Public tiers

FREE \$0 No Stripe product One board, full analyst (lighter Bedrock), weekly refresh, a few purchase tries. Upgrade for daily monitoring and volume.	GROWTH \$149/mo \$1,490/yr (10× monthly) Working buyer: handful of live boards, daily refresh, Bedrock analyst, purchasing headroom.	SCALE \$399/mo \$3,990/yr (10× monthly) Procurement desk: more boards, daily refresh, fuller agent, year-scale active set.
---	---	---

Sell **live BOMs + monthly line/analysis caps**. Seats are a ceiling, not the SKU. No metered overages. Enterprise stays sales-led / off the public grid. Do not degrade Free analysis quality — cap volume and refresh cadence. Purchasing is allowed on Free; scraping is stopped by the action cap, not a hard block.

LIMIT	FREE	GROWTH	SCALE
Seats (ceiling)	1	2	5
Active BOMs (monitored)	1	10	50
Max lines / BOM	100	500	2,000
BOM lines / month (analyses)	300	2,500	15,000
Analyses / month	3	20	100
Purchasing actions / month	5	40	200
of which orders (when enabled)	2	10	50
can_purchase	true	true	true
BOM / MPN storage	keep	keep	keep
Refresh window	weekly	daily	daily
Concurrent analyses	1	1	3
New unique MPN lookups / day	200	1,000	5,000
Bedrock	Haiku, capped	On	On

Definitions: lines/month = sum of lines in each analysis job (re-analyze counts). Active BOM = un-archived board in the monitoring set (refresh applies). Extra BOMs stay stored; they are not refreshed until they replace an active slot or the account upgrades. Seats: today 1 Cognito user = 1 seat. **Purchasing actions** = quote or order API calls against the purchasing skeleton. Do not put “quotes/mo” on the public grid — UX is TBD; this cap is internal/enforcement until the product ships a buying UI. Digi-Key ordering remains off in deploy until separately enabled; the order sub-cap is dormant until then.

3. Digi-Key 50,000 / day · 480 / min

Account billing@prokuro.ai: **50,000 lookups/day, 480/min.** v1 sized Free as if the limiter were 1,000/day and 120/min. Those numbers are obsolete for planning. They are **still what the code enforces** in `crates/prokuroEnrichment/src/providers/digikkey/rate_limit.rs` (MAX_PER_DAY=1000, MAX_PER_MINUTE=120). Ship order step 0 is to raise the limiter to 50,000 / 480 before opening Free or daily paid sync, or the new budgets will 429 against our own code.

BUDGET	V1	V1.1	WHY
In-process limiter (must match contract)	1,000 / 120	50,000 / 480	Code change required
Global Free intake / day	400	5,000	10% of 50k reserved for Free; paid keeps 45k
Free new MPN lookups / account / day	100	200	One 100-line BOM + rematch; 25 maxed Free accounts = 5k cap
Growth / Scale new MPN / account / day	500 / 2,000	1,000 / 5,000	Headroom for 500- and 2,000-line boards plus cache misses

Keep-forever catalog does **not** mean sync every MPN ever seen every day. At 50k/day, a 100k-part historical table would never catch up. Daily job order: (1) MPNs on paid active BOMs, (2) remaining quota for catalog freshness, (3) Free weekly refresh of the one active BOM. Nexar, when added, follows the same paid-daily / Free-weekly split.

4. Data: keep forever, gate refresh

S3 BOM artifacts and Dynamo MPN snapshots are cheap. Deleting Free data was the wrong control: it destroys the component network we are building and removes the conversion surface (their board is already in the product). v1.1: **never TTL-delete account BOMs or MPN cache for quota reasons.**

- Over active-BOM cap: keep the extra files; stop refreshing them; UI: stored, not monitored.

- Free stale: after 7 days without a weekly slot, show a stale banner (“Availability last refreshed n days ago — Growth keeps this live daily”). Data remains.
- Downgrade / cancel: keep data; drop to Free refresh and Free purchasing caps; do not wipe.
- S3: expire *noncurrent versions* at 30 days (cost hygiene), not current objects.

Conversion hook is **live monitoring**, not an empty Free tier.

5. Bedrock policy

Analyst/agentic path is the moat. **Growth and Scale: Bedrock on** (Haiku default; tighter token budgets than Sonnet). Free: Bedrock on but lighter — Haiku only, no recursive alternate expansion, counted inside the 3 analyses / 300 lines, max 50k tokens per analysis. Paid: Bedrock on for analysis and agent steps, still bounded by line/analysis caps. Do not run Sonnet on every line. Alarm Bedrock \$ in CloudWatch/Cost Explorer. This is a cost watch, not a reason to cut list price.

6. Cost snapshot (order of magnitude, USD)

Lights-on AWS still ~\$50–100/mo (base ~\$70). One Growth subscriber still covers baseline. Digi-Key cash remains \$0 at this contract; the scarce resource is 50k/day, not dollars. New COGS vs v1 is **Bedrock on paid** (~\$0.002/1k tokens Haiku blended ≈ a few dollars per Growth account, tens on a busy Scale account). Stripe (~\$5 on \$149, ~\$12 on \$399) is still comparable to infra. Mix assumed 50% Free / 40% Growth / 10% Scale. Not a bill.

N ACCOUNTS	GROSS REVENUE	INFRA+API+BEDROCK	STRIPE	CONTRIBUTION	MARGIN
10 (5F · 4G · 1S)	\$996	~\$120	~\$30	~\$850	~85%
50 (25F · 20G · 5S)	\$4,975	~\$350	~\$154	~\$4,470	~90%
200 (100F · 80G · 20S)	\$19,900	~\$1,200	~\$617	~\$18,100	~91%
1,000 (500F · 400G · 100S)	\$99,500	~\$6,000	~\$3,055	~\$90,400	~91%

	FREE \$0	GROWTH \$149	SCALE \$399
Infra + Haiku (base usage)	~\$0.50–1	~\$8–12	~\$30–50
Stripe	\$0	~\$5	~\$12
Contribution (base)	–\$1	~\$130	~\$340
Break-even vs \$70 lights-on	never	1 user	1 user

Sonnet on every Scale line at cap is still the only plausible way a \$399 account goes negative. Keep Haiku as default. Free variable budget remains ≤ \$1/user/mo with Haiku + 300 lines.

7. Stripe (TEST) and entitlements

Keep: Growth monthly price_1U4Mrn6OM1R4nep11h3o5N5N (\$149); Scale monthly price_1U4MsS6OM1R4nep1VdxKcCPb (\$399). **Create:** growth_annual \$1,490/yr; scale_annual \$3,990/yr. **No Free Stripe product.** Checkout: interval: month | year. Default plan=free with can_purchase=true and the Free caps below. Change status_from_record so Free is no longer blocked from purchasing — enforce the purchasing-actions counter instead.

```
{
  "free": { "seats": 1, "active_boms": 1, "max_lines_per_bom": 100, "lines_per_month": 300, "analyses_per_month": 3, "p
"growth": { "seats": 2, "active_boms": 10, "max_lines_per_bom": 500, "lines_per_month": 2500, "analyses_per_month": 20, "p
"scale": { "seats": 5, "active_boms": 50, "max_lines_per_bom": 2000, "lines_per_month": 15000, "analyses_per_month": 100, "p
}
```

8. Ship order and launch checklist

1. **Update Digi-Key rate limiter to 50,000/day and 480/min** (code still 1,000/120). Paid-priority queue + Free 5,000/day intake.
2. **Entitlements + 402s** on create_bom / analyze / purchasing actions. Weekly Free refresh + stale banner. Daily paid-active-BOM sync. Keep data; no TTL delete. Bedrock Haiku on paid; capped Haiku on Free.
3. **Flip can_purchase** so Free is allowed under the 5/2 cap. Do not market quotes as a grid feature.
4. **Annual Stripe prices + checkout interval.**
5. **Website pricing grid / real billing UI.** Do not advertise Free until 1–3 are live.

ITEM	TODAY	V1.1 REQUIRED
Digi-Key limiter 50k / 480	Code: 1k / 120	Change constants; add paid-priority + Free 5k/day
Per-tier quotas + 402s	Missing	Entitlements on analyze / BOM / purchasing
can_purchase	false on Free	true on Free; cap actions at 5
Sync policy	All known parts daily (and v1 said exclude Free)	Paid active daily; Free weekly; no catalog-wide brute force
BOM TTL delete	Not implemented; v1 recommended 14-day delete	Do not implement deletes. Stale banner + refresh gate
Bedrock	Not wired	On for Growth/Scale; Haiku-capped Free
Fargate min 1 max 2	desiredCount=1	Leave; alarm RunningTaskCount > 2
S3 noncurrent expiry	Versioned, no lifecycle	Expire noncurrent at 30 days; keep current
1 Free org / domain	Self-signup, no cap	Work email; block disposable

9. 30-day metrics, CloudWatch, red flags

Watch weekly. Retune *caps and copy* on day 30. Do not change \$149 / \$399 unless a red flag below fires.

Product / billing counters (gateway + Dynamo)

- Signups; Free → paid among Free that ran ≥1 analysis (target ≥8%)
- 402 cap hits by cap name (lines, analyses, purchasing actions, MPN/day)
- Free cap-hit rate 20–40% of actives
- Analyses / active user; lines / analysis (p50 / p90)
- Purchasing actions / user (Free vs paid) — watch scraping
- Stale-banner impressions vs Growth checkout
- Stripe: Growth vs Scale; monthly vs annual

CloudWatch native

- AWS estimated charges: alert \$150, panic \$250
- Bedrock InvocationModel \$ / token counts (new vs v1)
- Logs IncomingBytes; keep 1-day Fargate retention; alarm > 5 GB/day
- ECS RunningTaskCount > 2
- Digi-Key 429s / rate-limit errors on enrichment (should be rare at 50k if limiter matches contract)
- ALB 5xx; gateway 402 count as a custom metric
- Dynamo consumed RCU/WCU on prokuro-parts (catalog growth)

Tighten Free immediately: AWS bill >\$150 with <20 paid; Bedrock \$ surprising vs Haiku model; Digi-Key 429s starving paid daily sync; one domain burning the 5,000/day Free intake; Free purchasing actions used as a quote-

scrape farm (many accounts, 5 actions each, no analyses); Free users splitting 500-line production BOMs. **Raise price only after 30 days** if conversion >25% and paid users sit >80% of caps without churn. **Do not raise** if conversion <5% — tighten Free refresh/actions and the stale-banner upgrade copy first.

Decision. v1.1 is locked. Prices unchanged. Implement limiter 50k/480, keep-forever storage, weekly Free / daily paid refresh, Bedrock on paid, Free purchasing under 5 actions. Then annual Stripe, then the public grid.

Live deploy (footnote): Gateway <http://prokuro-backend-2059790516.us-west-2.elb.amazonaws.com> · App <https://main.doue9i9pzude.amplifyapp.com> · Billing APIs live; Amplify Account UI still old mock until web billing push. · Digi-Key contract: 50,000/day, 480/min on billing@prokuro.ai — not yet reflected in rate_limit.rs.
